DATA AND INTELLIGENCE

Partnering with you
to find solutions.

Introduction

How do you resolve your frustration with manually combining reports from multiple Excel files into something comprehensive, polished, and shared securely across the business?

Does your company have the capacity to take advantage of the data at your disposal and eliminate the laborious task of retyping information from one software application into another? Or, can you create the ability to do a rapid assessment for an “order of magnitude” estimate?

As part of its mandate, the Data and Intelligence group will collaborate with you to identify data flows and management problems, comprehend them, and find solutions.

How Does The Data And Intelligence Unit Work?

Information technology, data automation, analytics, and intelligence are all aspects of our work.

We strive to make our clients’ lives easier by automating integrations between software and platforms and finding new and innovative use cases for existing data and information.

Leverage our experience to help you identify and resolve common data issues. Our solutions are rapidly deployed and tightly integrated within your existing business workflows.

We have an unwavering commitment to simplifying, automating, and taking away anything that keeps you away from running your business.

Products, Solutions and Services offered by the Data and Intelligence Unit

1. Digital Estimator

Our Building Information Modelling (BIM) software platform integrates complete BIM and estimating functionality into a single product.

2. Benchmark Estimating Analytics

Our data analytics offering. This unique solution delivers a comprehensive analytics solution tightly integrated into the estimation process.

3. Business Insights

Our reporting and dashboard market offering. It’s an executive-level solution built to demystify your business. Leveraging Microsoft Power BI, Business Insights gives you complete control over your data and reporting requirements. It is visual and intuitive and gives you a 360-degree view of your business.

4. Data Migration and Management Services

Moving, transforming, and managing data between software can be complex. But often, data contains valuable information that can enhance business performance and outcomes. Our data services can help unlock the intellectual property already included within this information.

HOW CAN BENCHMARK'S DATA AND INTELLIGENCE UNIT HELP?

1. Our team has over ten years of experience successfully executing data transformation and migration projects
2. We partner with you to find solutions
3. Eliminate the laborious task of retyping information from one software application into another
4. Provide data migration and management solutions to transform and enhance your business outcomes
5. We deliver Information technology, data automation, analytics, and data intelligence solutions
6. Have a comprehensive view of your organisation's data and use that data to help you drive change, eliminate inefficiencies, and quickly adapt to market or supply changes
7. Assist your company in integrating a data strategy for collecting, preparing, and reporting essential data.
8. Improving operational efficiency and boosting productivity through automation
9. Support your company with governance and regulatory reporting requirements
